### **DETAILED ACTION**

1. Claims 56-87 are presented with amendment filed 06/12/2009.
2. Claims 56-87 are allowable.

#### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance: Claims 56, 71 and 78 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 56, including "obtaining information pertaining to each of the plurality of components that are used in said communications network from a parts list library (Specification: Pg.50 Lines 13-24), wherein at least some of said information obtained from the parts list library includes frequency-dependent characteristics (Specification: Pg.50 Lines 25-Pg.52 Line 3) of particular ones of the plurality of components, the frequency-dependent characteristics comprising a plurality of values for an operating characteristic of the particular component, each of the plurality of values describing the operating characteristic of the particular component at a different operating frequency (Specification Pg.52 Line 5- Pg.54 Line 5). Further claim 56 is allowable because performance of each component is automatically evaluated at the modeled operating frequency, where values for different operating frequency are present in each component model, without changing the component model as the model has frequency-dependent characteristics for each individual different frequencies.

Art Unit: 2128

Claim 71 (system claim) and Claim 78 (method claim) also discloses similar limitations.

***Prior Art of Record***

4. **US Patent 7,171,208** also by Rappaport, and parent of this case, does not claim the frequency-dependent characteristics comprising a plurality of values for an operating characteristic of the particular component, each of the plurality of values describing the operating characteristic of the particular component at a different operating frequency and there after modeling performance characteristics of the communications network based upon the information and the site-specific computerized model at a modeled operating frequency, wherein the modeling comprises automatically evaluating the particular components using one of the plurality of values for the operating characteristic of the particular component obtained from the parts list library that corresponds to the modeled operating frequency.
5. **SitePlanner 3.0 and 3.16** also lack component model modeling characteristics for various frequencies as described in specification Pg.52-54.
6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
